The drying rack for a lifetime

Liberates your space.

Saves resources.

Is manufactured in a social and responsible way.

Can be tailored to your needs.

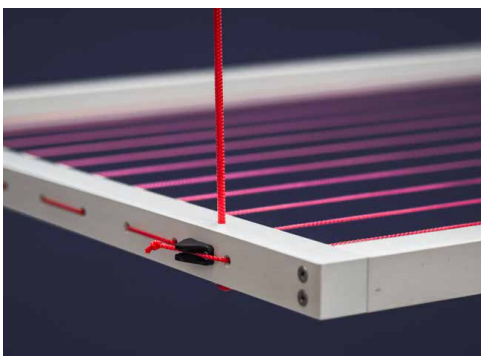

Purpose

Hangbird solves a problem we all know:
The drying rack is in our way.

Using a pulley system, Hangbird lifts your
laundry up under the ceiling and out of the
way, creating more living space.

It dries laundry faster than any other drying
rack as it takes advantage of the natural rising
warm air in your home. The frame accommo-
dates a clothesline of up to 22 meters (72'),
holding up to three loads of laundry. The
clothesline can be used optimally, since each
individual clothesline is long and continuous.
Thus also ideal for large pieces of laundry,
such as bed linens.

Hangbird is childproof: It cannot tilt like
conventional drying racks.

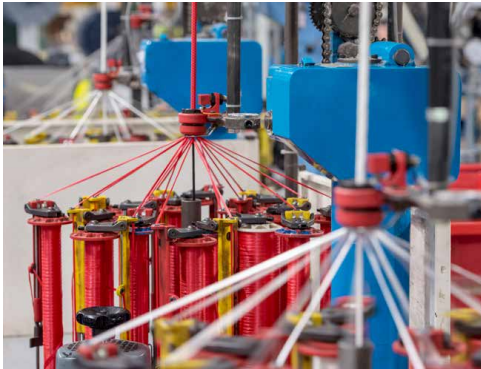

Environment

Hangbird is sustainably manufactured in Germany: the wood is sourced from German forests and Hangbird uses high quality materials like beech wood, ropes and nautical fixtures that all guarantee a long life.

The use of Hangbird will cut your energy bill, reduce your carbon footprint and preserve your favourite clothes longer. On average, it reduces the current consumption of a 3 person household with an electrical dryer by one quarter, thus reducing annual electricity costs by up to approx. 250 €.

Social production

Hangbird was designed such that it can be produced in cooperation with workshops that employ people with special needs, helping them integrate into the workforce.

Due to their mental, physical or psychological impairment, they would generally have no chance of employment in the market place. The production of a high quality piece of furniture can boost their confidence and empower them to make their own economic contribution.

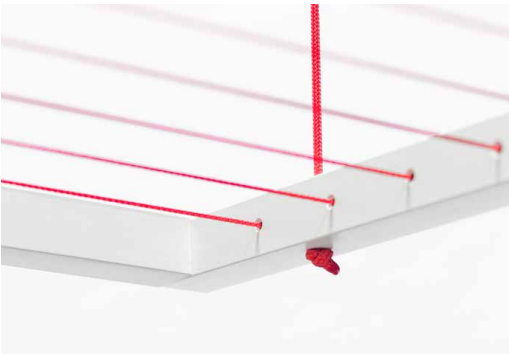

Individual design

Hangbird is delivered as a complete kit with all necessary parts, including mounting anchors (for massive and suspended ceilings) as well as step-by-step assembly instructions. For installing, conventional tools are necessary.

The size and design can be customised individually:

- 6 different frame sizes*
- Wood surface: natural or glazed white
- Rope colours: white, red, blue, orange, grey, bordeaux or pink – available colours see web page.
- Two- or fourfold pulley system

History

“Where shall I put the rack?”
“Definitely not in the living room!”
“Not in the bedroom either!”
“I would prefer to get rid of it completely!”
“There must be a good solution!”

After similar dialogues with his wife and before the birth of his son, Samuel Kutter was reminded of a traditional laundry drying rack from his time studying abroad in England. Inspired by a Victorian model, he developed Hangbird in a timeless and practical design.

Hangbird

The Hangbird truly exists!

The *Baltimore Oriole* (lat. *Icterus Galbula*) is a songbird from America. It winters in Central America and returns to North America in spring for breeding. The *Baltimore Oriole* was also in search of a good solution: “How can I keep my small, freshly hatched babies away from nest robbers?” As with our Hangbird nestled away under the ceiling, the *Baltimore Oriole* hangs its nest far above in the crown of the trees.
